

Icicles, ice dams, and snow slides are all dangerous and destructive consequences of living in snow country. Millions of dollars of damage result each year as ice and water penetrates roofing materials and leaks into homes and offices. Many injuries occur as icicles and large amounts of snow suddenly slide off of roof lines onto walkways and entrances. Heatizon Systems produces the perfect long term solutions to dangerous and destructive ice and snow build up on roofs.

INVISIBLE PROTECTION

Heatizon's patented roof heating products install directly under your roof covering materials protecting your investment from leaks and ice dams without sacrificing the aesthetic beauty of your roof line. Our roof de-icing products are the only way to permanently protect your investment from winter woes.

VALUE

Heating your roof eaves and valleys with a Heatizon System adds value to your home by eliminating potential roof leaks, torn gutters, and damaged shingles. It also increases the life of your roof by preventing chemicals and workers from damaging your roof. In addition your investment in a Heatizon System will set your mind at ease knowing your customers, employees, friends and family can avoid injuries sustained from sliding snow and ice.

SAFETY

Protect guests, clients, and loved ones and relax while our system safely prevents dangerous snow and ice build up on your roof. Our roof de-icing systems also utilize gentle low voltage technology throughout your roof 's eaves and valleys. The Heatizon Control Box incorporates a self-monitoring computer board with auto shut off mechanisms for out- of-ordinary operation.

QUALITY

The entire Heatizon Systems product line is solid state, has no moving parts to wear out, and has nothing that requires routine maintenance. Our heating elements are the most durable available and are backed by an industry leading 25 year limited warranty. In addition, our automated on/off activation devices make heating your roof a "no brainer."

PRODUCTS FOR COMMERCIAL, INDUSTRIAL AND RESIDENTIAL PROJECTS

Z-MESH is a one of a kind heating element that is made to go on a wood sub roof directly **under** any non-conductive shingle. The Zmesh requires no build up, and can be nailed or stapled through provided it does not come in contact with any other electrically conductive material. This ability makes it the most durable roof heating element available.

TUFF CABLE IN HEATSINK

Tuff cable is used in a heat sink kit for metal roofing applications, or under valley metal and metal flashing.

Ice Dam Prevention

SOLUTIONS
