

Tired of getting stuck in your own driveway? Or are your clients at risk every time there is snow or ice on the sidewalks, stairs, or access ramps in front of your business? Or maybe you're just sick of dawn patrol with your snow shovel. In any case, Heatizon Systems low voltage snow melt technology is the solution.

CONVENIENCE

Retire your snow shovel and relax in the mornings by installing a driveway heating system in your home or business. Our radiant snow melting technology is designed to conveniently and automatically eliminate snow and ice build up day and night, so you don't have to.

WORRY FREE RELIABILITY

The entire Heatizon system is solid state, has no moving parts to wear out, and has nothing that requires routine maintenance. Our heating elements are the most durable available and are backed by an industry leading 25 year limited warranty. An automated on/off activation device makes heating your driveway a "no brainer".

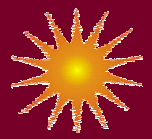

COST EFFECTIVE

Our driveway snow melting systems are designed to operate only when necessary and can be programmed to turn on automatically when snow is falling using advanced temperature and snow sensing controls. This also makes it easy to calculate operating expenses. For example, in the U.S. an area of 285 square feet at the average power rate will cost less than 40 cents per continuous sixty minutes of operation time!

VALUE

Heating your driveway with a Heatizon System adds value to your home, and increases the life of your driveway by preventing chemicals, shovels, and snow plows from damaging its surface. In addition your investment will set your mind at ease knowing your customers, employees, friends and family can avoid injuries sustained from slipping on icy driveways and walkways. An automated snow melting system also eliminates shoveling or plowing creating free time to the owner-yielding yet another very nice dividend!

TUFF CABLE RETROFIT

Tuff Cable can be installed in an existing asphalt or concrete driveway, walkway, stairs, or access ramps without tearing out existing surfaces!

TUFF CABLE IN NEW POUR CONCRETE OR ASPHALT

Tuff Cable can be installed into new or existing asphalt, concrete and under brick or stone pavers.
